

An innovative and reliable solution to centralise and manage your clearing risk!

Post-Trade and Clearing risk control are crucial elements for any Clearing institution. Banks have to face risk of default of their clients, as well as to anticipate their next CCP daily margin call.

SLIB RMS is an innovative product that addresses these issues at several levels. It enables you to monitor and consolidate the intraday risks of your client through the use of a chosen methodology (VaR, CCP algorithm or your own risk engine), running up to every 5mn, plus a Real-Time Control component that re-assesses the risk exposure between 2 calculations, in less than 1 second.

SLIB RMS then covers the full margin process across markets with your clients, from consolidated margin call requirement computation to Margin call notice and accounting movements generation.

Whom is SLIB RMS intended for ?

- Dedicated to all **ICM** (Individual Clearing Members) and **General Clearing Members** (GCM) who need to hedge exposure induced by their client's activity, whether listed or OTC.

Why choose SLIB RMS ?

- **Reduce operational risks and costs** with a seamless margin call process
- Build your **portfolios** and consolidation levels easily
- **Monitor your exposure** in real time, set up your limits and receive alerts immediately
- Browse through a client's **exposure detail**
- **Share information** with your clients in real-time
- Integrate your **own algorithms**
- Successfully **monitor increasing volume activity** with peace of mind
- Ensure **compliance**, security and availability
